Who am I ?

I'm a JS developer & MERN Stack Enthusiast currently based in Hyderabad. I love everything that has to do with Coding & Problem solving, Automation, Application development. I have more than 4 years of experience working as a Software developer.

I love working with people, especially if they have the same passion.

WORK EXPERIENCE

Full Stack Developer **12/2020**

Monocept - Hyderabad, Telangana

Was working for Maxlife Insurance, in their platform to manage the insurance journey and simplifying the process.
The tech stack was React and Node.

Full Stack Developer **04/2020 - 08/2020**

Smarter Dharma - Bommasandra, Karnataka

Participating in full lifecycle of development for company's web application using MERN Stack from scratch.
Maintaining the API and also involved in testing and designing.

Software Developer **02/2017 - 09/2019**

ZeOmega - Bangalore, Karnataka

Wrote SQL queries to manage data from the database using MSSQL Server
Worked on Sentinel rule based engine and backend.
Also, worked on React in the front-end part

Software Test Engineer **06/2016 - 01/2017**

TCS - Chennai, TamilNadu

Worked as Manual tester for Woolworth's application

EDUCATION

M.S., Software Engineering **2011 - 2016**

VIT University

It's an Integrated course of 5 years.
Graduated with 7.93 CGPA

Higher Secondary Schooling **2009 - 2011**

SRV Matriculation School

Took up Computer Science group.
Passed out with 81.5 %

COMPANY PROJECTS

Tools

MUI, React,
Redux, Nodejs,
Mongoose, Mongo DB

MUI, React, VS code,
Postman, Nodejs,
Express, Mongoose,
Mongo DB

BootStrap, React,
Sublime text, Postman,
Zope, Python, MSSQL

PERSONAL PROJECTS

MUI, React, Redux,
VS code, Postman,
Firebase

React hooks, MUI
VS code, Postman,
Mongo DB

MUI, React, VS code,
Nodejs, Express,
Mongoose, Mongo DB

PROJECTS

Monocept

Maxlife insurance provides policy plans that differ based on many criteria. So they wanted to ease the buyers journey by recommendation, auto population of data etc.

I was dedicated to develop the journey for policy holders in front-end and back-end by following the business procedure.

SD Plus CASA

SD wants to push the boundaries of conventional building standards and norms to achieve a perfect synergy of design & technology.

My work was to design the front-end and data flow within the app and build it accordingly.

In the back-end, worked to achieve Rest API and developed a Calculus Engine for the algorithms.

Sentinel Rule based engine

It's an intelligent automation that removes the human error factor, helping to ensure accuracy across tasks. No submitting tickets. No waiting. Just done fast and right.

I worked in the development side of the engine where they can configure rules based on the events, criteria and actions.

Insurance Assessment Module

The Assessment activity module is a way for insurance providers to support client's assessments. Where, the upcoming questions are dynamically generated based on the previous answers.

Template engine

It allows users to easily generate PDF documents and reduce the effort and automates the process of creating and managing their document templates from the assessments they have answered with the needed education materials.

Socialize

It's a fun project in an attempt to clone Twitter, where people can post content and view, like, comment other's post.

To-do app

This is a typical To-do application reflecting the same functionalities of Ubuntu To-do. Here, the tasks can be added, updated, deleted and managed with list of tasks.

Casa Foods

It's a platform where users can customize their food by adding their core recipe. Which allows Nutritionists to customize diet based on their weight, age, etc.,
